

MCH22-36 Auto Drain Assembly

SKU: 6050.5

Price: ?1,637.06

Description

Auto drains automate the compressor condensate draining process. This optional compressor feature eliminates the need for an operator to manually drain the compressor every 10 to 15 minutes. Improper condensate drain practices may lead to diminished filter life, increased operation temperature and compressor damage due to water accumulation in the compressor stages resulting in hydraulic backwater failure.

Auto drains are easy to maintain and operate. Single-, double-, triple- and quad-stage auto drain versions are available for compressor systems with one or more coalescing towers. Each auto drain version can be modified for 100-120 VAC, 220-240 VAC, and 12 VDC. Please call us at 805-815-4044 for more information on the right auto drain for you.
