

# Single Whip Non-Regulated Paintball Fill Panel

SKU: PN1

Price: ?540.00

## Description

For use with paintball systems. This single fill station is constructed of stainless steel and high quality fittings. It is custom built at our California production facility. It can be installed and operated at the paintball field or in a shop. The fill station includes a toggle actuated fill valve that relieves line pressure when released. A rubber weight on the included fill hose prevents whipping if accidentally pressurized without a tank connected.

Dimensions with fittings, no hose (W×D×H): 14-1/8×14-3/4×7 in. The max working pressure is 5000 psi (345 bar).

See our [Paintball Accessories Page](#) for hoses and fill adaptors that can be used with our station.

All paintball fill panels are custom-made. Please [contact](#) the sales team for estimated lead times.

Please Note: Fill panels are a gas management tool. Fill panels do not generate compressed air. A source of compressed air is required to fill tanks.
