

4 Bank Air/Nitrox Fill Panel with Remote Feed

SKU: PN-VDS

Price: ?0.00

Description

Constructed of stainless steel and high-quality fittings, a gas distribution (fill) panel dispenses gas from storage banks to cylinders/tanks. With a maximum operating pressure of 6000 psi (414 bar), this fill panel can be used in any application where non-corrosive gas is distributed from storage banks to cylinders. Nuvair fill panels are built-to-order at our California production facility.

Please Note: Fill panels are a gas management tool. Fill panels do not generate compressed air. A source of compressed air is required to fill tanks.
