

Christo Lube Alternative for Rotary Compressors (O₂ Compatible)

SKU: 042312C

Price: ?0.00

Description

100% oxygen compatible lubricant is for use with high oxygen content handling rotary compressors. Sold by the pound.

Perfluoropolyether (PFPE) lubricants are often chosen for their extreme temperature capabilities (-90°C to +250°C), excellent compatibility with virtually all materials (including plastics and elastomers), or their inertness: PFPEs do not react with oxygen, other gasses, chemicals, solvents, or automotive fluids.
